Attach to this application a topographic map of the area extending to at least one mile beyond property boundaries. The map must show the outline of the facility, the location of each of its existing and proposed intake and discharge structures, each of its hazardous weste treatment, storage, or disposal facilities, and each well where it injects fluids undergound, include all springs, rivers and other surface water bodies in the map area. See instructions for precise requirements.

6.2.3 Return Land to the Appearance and Use of Surrounding Land

In accordance with WAC 173-303-610(2)(a)(iii), the owner or operator of a TSD unit is required to close the unit in a manner that returns the land to the appearance and use of surrounding land areas to the degree possible given the nature of the previous dangerous waste activity.

When closure of the Ash Pit Demolition Site is accomplished, the site will be returned to the appearance and continued use of the surrounding 200 West Area Ash Pit.

6.3 OVERVIEW OF CLOSURE ACTIVITIES

The activities presented in this section are divided into planning activities and physical activities.

6.3.1 Planning Activities

The DQO planning process was used to ensure that the performance standards are met to the satisfaction of all parties involved. This DQO process provided the framework for the SAP and defined the data needs and uses. The SAP provides the documentation of agreement and decisions regarding establishing and meeting the action levels for the Ash Pit Demolition Site closure (Appendix 7C.)

6.3.2 Physical Activities

The general closure activities are as follows.

- Perform radiological survey (Completed 5/92).
- Collect soiled samples from within the Ash Pit Demolition Site. Sample locations and collection methods are discussed in Chapter 7.0, Section 7.2.3, and SAP (Appendix 7C) (Completed 6/94).
- Analyze samples in accordance with EPA-approved procedures and evaluate results. Samples will be analyzed in an offsite laboratory capable of performing to EPA Analytical level III standards.
- Compare analytical results to action levels to determine the extent of contamination and to determine the presence or absence of contaminants.
- If contamination levels for all constituents of concern are below their action levels, the Ash Pit Demolition Site will be clean closed.
- If contamination at the Ash Pit Demolition Site is above the action level, a phase two investigation will be developed. The phase two

investigation will be developed in a subsequent DQO negotiation process with all parties involved.

All equipment used in performing closure activities will be decontaminated or disposed at a RCRA-compliant facility.

Closure activities will be monitored by an independent registered professional engineer who will certify that closure activities were accomplished in accordance with the specifications of the approved closure plan.
